**ACTIVITY NO. ___ [ACTIVITY NAME]**

## 1. PROCEDURE OUTPUT

Task 1: Run elevated ad hoc commands

**ansible all -m apt -a update_cache=true**

What is the result of the command? Is it successful?

```
pizza1@pizza1-local:~/Desktop$ ansible all -m apt -a update_cache=true
[WARNING]: No inventory was parsed, only implicit localhost is available
[WARNING]: provided hosts list is empty, only localhost is available. Note
the implicit localhost does not match 'all'
```

- Running this command was not successful

```
pizza1@pizza1-local:~/Desktop$ ansible all -m apt -a update_cache=true --
[WARNING]: Platform linux on host localhost is using the discovered Pytho
interpreter at /usr/bin/python3.10, but future installation of another Py
interpreter could change the meaning of that path. See
https://docs.ansible.com/ansible-
core/2.17/reference_appendices/interpreter_discovery.html for more inform
localhost | CHANGED => {
    "ansible_facts": {

 'sudo apt autoremove' to remove them.\nThe following additional packages will
e installed:\n  fonts-lato liblua5.2-0 libruby3.0 rake ruby ruby-net-telnet ru
-rubygems\n  ruby-webrick ruby-xmlrpc ruby3.0 rubygems-integration vim-common
```

```
pizza1@pizza1-local:~/Desktop$ apt search vim-nox
Sorting... Done
Full Text Search... Done
vim-nox/jammy-updates,jammy-security,now 2:8.2.3995-1ubuntu2.36 amd64 [inst
]
  Vi IMproved - enhanced vi editor - with scripting languages support

vim-tiny/jammy-updates,jammy-security,now 2:8.2.3995-1ubuntu2.36 amd64 [ins
d,automatic]
  Vi IMproved - enhanced vi editor - compact version

pizza1@pizza1-local:~/Desktop$
```

Can you describe the result of this command? Is it a success? Did it change anything in the remote servers?

- Yes, the vim was successfully installed in the remote server

**Installing snapd**

```
pizza1@pizza1-local:~/Desktop$ ansible all -m apt -a name=snapd --become --ask-b
ecome-pass
BECOME password:
[WARNING]: Platform linux on host localhost is using the discovered Python
interpreter at /usr/bin/python3.10, but future installation of another Python
interpreter could change the meaning of that path. See
https://docs.ansible.com/ansible-
core/2.17/reference_appendices/interpreter_discovery.html for more information.
localhost | SUCCESS => {
    "ansible_facts": {
        "discovered_interpreter_python": "/usr/bin/python3.10"
    },
    "cache_update_time": 1788394521,
    "cache_updated": false,
    "changed": false
}
pizza1@pizza1-local:~/Desktop$
```

- By doing this, all of the servers will able to force update the snapd package in the remote servers.

```
pizza1@pizza1-local:~/Desktop$ ansible all -m apt -a "name=snapd state=latest" -
-become --ask-become-pass
BECOME password:

[WARNING]: Platform linux on host localhost is using the discovered Python
interpreter at /usr/bin/python3.10, but future installation of another Python
interpreter could change the meaning of that path. See
https://docs.ansible.com/ansible-
core/2.17/reference_appendices/interpreter_discovery.html for more information.

ate information...\nThe following packages were automatically installed and are
no longer required:\n  libfwupd2 libfwupdplugin5 libgcab-1.0-0 libsmbios-c2\nUse
 'sudo apt autoremove' to remove them.\nThe following packages will be upgraded:
\n  snapd\n1 upgraded, 0 newly installed, 0 to remove and 118 not upgraded.\nNee
```

Task 2: Writing our First Playbook

install_apache.yaml

```yaml
---
- hosts: all
  becoeme: true
  task:

  - name: install apache2 package
    apt:
      name: apache2
```

Running the .yml file

-

```
pizza1@pizza1-local:~/ansible-lab$ ansible-playbook --ask-become-pass install_ap
ache.yaml
BECOME password:

## 2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Copy and paste the questions from the lab and include your answers after.
Answer the following:
1. What is the importance of using a playbook?
Ansible playbooks automate complex system configurations into repeatable, human-readable YAML files that eliminate manual setup errors. They allow you to practice Infrastructure as Code (IaC) by consistently deploying and managing the same setup across one machine or thousands of servers.

2. Summarize what we have done on this activity
We set up your local Ansible inventory file in /etc/ansible/hosts and cleared background system package locks that were blocking installation tasks. Afterward, we troubleshot ad-hoc CLI commands and corrected YAML syntax errors in your install_apache.yaml playbook to prepare it for execution.

## 3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

**Tools Used:**

*Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.*

**Purpose of Use:**

*Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of concepts, etc.*

**Extent of Use:**

*Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.*

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.

Lab activities, templates, and related instructional materials shall not be reuploaded, reproduced, distributed, or shared with external organizations or third parties without the prior express written permission of the Technological Institute of the Philippines.
